EXHIBIT A (Amended)

P.V.P. No. 7400026

ORIGIN AND PLANT BREEDING HISTORY OF SOYBEAN MCKOY 1100

Originated from a single, extremely vigorous, well branched plant containing 366 beans in the fall of 1966 from a 30 acre field (variety unknown) in DeKalb County near Kirkland, Illinois.

Seeds from this selection were hand planted in a garden near DeKalb, Illinois in 1967. Crop was harvested and seed bulked. No selection was made.

In 1968 ten rows were planted using the 1967 seed. Spacing within the row was three inches. No selections were made and the seed was bulk harvested. This experimental variety was called McKoy.

Sixteen rows were planted in 1969, each row was 40 rods long. One plant in this population was selected which produced 1,146 beans. Seed from this selection was kept separate from the McKoy and named McKoy 1100.

In 1970 the 1,146 beans (McKoy 1100) were planted in a garden and the seed bulk harvested. No selections were made.

In 1971 the original experimental variety, McKoy, was entered in the University of Illinois trial at DeKalb. Twelve rows were planted, each 60 rods long, of the 1970 McKoy 1100 seed. Seed was bulk harvested. No selections made.

In 1972 another bulk increase was made of McKoy 1100 using the 1971 seed. Both McKoy 1100 and the experimental variety McKoy were entered in the University of Illinois trial at DeKalb.

In 1973 McKoy 1100 was again entered in the trials at DeKalb and the 1972 seed again increased.

In 1974 McKoy 1100 was entered in various State Experimental Station trials.

The variety is stable and does not produce segregates or off types.

EXHIBIT B

BOTANICAL DESCRIPTION OF THE VARIETY

McKoy 1100 is a tall, indeterminate type of soybean in the maturity group II and is similar in plant characteristics to McKoy and Amsoy but has more branching and matures slightly earlier.

The seed is spherical in shape and ^{yellow R/S} ~~buff~~ in color with a ^{yellow R/S} ~~buff~~ colored hilum. One hundred seeds weight approximately 18 grams or similar to the variety Beeson. Cotyledons are ^{yellow R/S} ~~green~~. Leaflets are medium in size, dark green in color and ovate. Stems and leaves have pubescence which is gray in color. Secondary branching is evident from leaf axils which produces a bushy plant type. Flower color is light purple. Pod color is brown.
